UNIVERSITÀ DEGLI STUDI DI PADOVA

DIPARTIMENTO DI INGEGNERIA DELL'INFORMAZIONE

Foundations of Databases A.Y. 2021-2022
Homework 2 – Conceptual and Logical Design

Master Degree in Computer Engineering
Master Degree in Cybersecurity
Master Degree in ICT for Internet and Multimedia

Deadline: November 26, 2021

Team acronym	TAGMS	
Last Name	**First Name**	**Student Number**
Giuliani	Amedeo	2005797
Collado	Martin	2039907
Insert last name here	Insert first name here	Insert student number here
Zanini	Samuele	2019038

Conceptual Design

Variations to the Requirement Analysis

There are no relevant variations to Requirements Analysis.

Entity-Relationship Schema

Data Dictionary

Entities Table

Entity	Description	Attributes	Identifier
Employee	Represents data of an employee who works in the company and needs access to the system	• Badge_number • First_name • Last_name • Phone_number • Email_address • Password • Gender • Birth_date • Hiring_date • Role_ID • Department_ID	Badge_number
Role	Represents data on the role of employees who work in the company	• ID • Name • Description	ID
Department	Represents data on the departments in which employees work	• ID • Name • Description	ID

Customer	Represents data about a customer of the company	• ID • Customer_name • Phone_number • Email_address • Address • Registration_date	ID
Contract	Represents data about a contract stipulated between a supplier and a manager for the supply of items	• ID • Name • Description • Agreement_date • Supplier_ID • Employee_ID	ID
Order	Represents the order placed by a salesman for a customer	• ID • Order_date • Customer_ID • Sub_total • Product_name • Product_type • Product_quantity	ID
Payment	Represents the payment made by the customer	• ID • Payment_method • Payment_status • Invoice_ID • Order_ID	ID

Inventory	Represents the inventory of the company, containing products and items	• ID • Element_type • Element_ID • Element_quantity • Storage_ID • Expiration_date • Price	ID
Storage	Represents the physical storages that contain the elements present in the inventory	• ID • Name • Location	ID
Product	Represents the final product that is marketed	• ID • Serial_number • Name • Description • Item_list • Product_category_ID	ID
Product_category	Represents the category of product ready to be sold	• ID • Name • Description	ID

Item	Represents materials provided by suppliers from which the final products will be produced	• ID • Description • Item_category_ID • Supplier_ID • Nutritional_values	ID
Item_category	Represents the category of material provided by suppliers	• ID • Name • Description	ID
Invoice	Represents the invoice associated with the order of a customer	• ID • Total_amount • Product • Quantity	ID

Relationships Table

Relationship	**Description**	**Component Entities**	**Attributes**
Has	Relates each employee to a role	• Employee (0,1) • Role (0,N)	None
Belongs to	Assigns each employee to a department	• Employee (0,1) • Department (0,N)	None
Stocked into	Specifies the items and product stocked in the inventory	• Item (0,1) • Product (0,1) • Inventory (0,N)	None

P_belongs_to_c	Links product to the category	• Product (0,1) • Product category (0,N)	None
I_belongs_to_c	Links item to the category	• Item (0,1) • Item category (0,N)	None
Made up of	Describes which items are involved into creation to the product	• Item (0,N) • Product (0,1)	None
Agree	Represent the contract between the supplier and the company	• Supplier (0,1) • Employee (0,N) • Item (0,N) • (Contract (1,1) (da vedere))	(date_contract da vedere)
Ships	Relates the employee shipping the order with the order itself and the shipment details	• Employee (0,1) • Shipment (1,1) • Order (0,1)	None
Makes	Links the order made by the customers to the invoice generated by the employee	• Employee (,) • Invoice (,) • Customers (,) • Order (,)	None
Pays	Associated the customers to the order	• Customers (,) • Order (,)	None

External Constraints

- Employees can only insert and modify transactions in their particular department and role (i.e workers assigned in raw materials cannot add finished products transactions)
- Customers coordinate with Salesmen thus, only Salesmen can create Customers' profile, orders and payment and track status

Functional Requirements Satisfaction Check

The DBMS has to be able to:

- **store all the details of the employees, customers and suppliers in the organization:** Entities Employee and Role store data related to the employees. Entity Customer has details about the customers and entity Supplier has data related to the Supplier.
- **allow the employees to update their personal information:** Entity Employee has some attributes as Email, Password or Phone Number which can be changed. Employees can access the system using their credentials which are Email and Password and change their personal data.
- **store details of all on-hand products in the warehouse such as item code, item description, quantity and expiration date:** Attributes ID_Product, Description, Expiration_Date from entity Product and ID_Item, Description from entity Item show this data. Secondly the amount of each product is shown in attribute Element_quantity of entity Inventory.
- **allow the employees to log into the system and enter the inbound items they received with information item code, item description, quantity, expiration date and supplier:** With attributes Email and Password employees log in the application and insert this data in Entities Product,Item and Inventory.
- **show and generate the list of inbound and outbound transactions:**
- **allow the employees to log into the system and enter the outbound transaction needed for the issuance of the products in the production and shipment to the customers:**
- **inventory stocks will be automatically updated whenever there are inbound and outbound transactions:**
- **show and generate the current inventory balance or stock inquiries:**
- **receive and process the Customers order, specifying which products they want and respective quantity:** Salesmen who are responsible of making orders check if there is enough quantity of the product. If there is enough, they insert in Entity Order a new row with attributes mentioned in the Entities Table. The attribute Id_order identifies each order.
- **modification and cancellation of orders:**
- **allow users to view order and shipment status of finished products:**
- **generate invoice whenever payment has been made:** When a customer pays an order, there is an insertion in Entity Invoice. Each invoice is identified by the attribute Id_invoice.

- **permit transfer of items and products:**
- **grant Cycle Counting in order to validate the accuracy of inventory:**
- **re-ordering the previous orders is allowed:**
- **create tracking code for orders:** Attribute ID_Order of Entity Order store an unique identifier of each order. It is shown too in the relationship Ships between Order, Employee and Shipment.

The system must store

- Customer data:
- Employee data with its activity:
- Any action of the employee on the order will be stored on the Order entity.

The system must allow Customers to:

- View orders and shipping specifications
- Customer will be able to check where the order is with the tracking number.

The system must allow Employee to:

- Login to system using the email address and password
- Modify/delete the order
- modify their personal information
